TELUS I&R Partner Safety Interlock Call

Attendees: Melanie Brodeur , Amir Merat , Shane Moews , April Broughton, Elliot Thomas

Unable to attend: Ria McDonald

Summary

Quarterly safety syncs will prioritize actionable hazard mitigation and shared learning over administrative data reviews.

Safety Governance Approach

Participants agreed to transition from reviewing standardized accident data to focusing on actionable hazard discussions. This change prioritizes relevant, shared learning over administrative metrics.

Key Safety Hazards

The primary safety concern identified was customer harassment, with significant reports linked to mental health and racial issues. Dog bites emerged as a critical secondary issue requiring future mitigation strategies.

Operational Communication Tools

A centralized website was established for managing agendas and tracking safety topics. Partners are encouraged to utilize this portal to identify high-value subjects for future collaboration.

Decisions

Aligned

- **Meeting topics focus on safety hazards** The group will prioritize discussions on hazards and safe work procedures over reviewing standard accident statistics during quarterly calls.
- **Roof work policy prohibited** Partner technicians will not perform work on roofs, confirming that this activity is outside of the safe work procedures.
- **Quarterly meeting cadence established** Meeting frequency is set to a quarterly cadence, with the flexibility to postpone or shorten sessions if there are insufficient topics.
- **Next meeting scheduled for October** The next safety meeting is confirmed for early October, following an agreement to move the date from September.

Next steps

- ☐ [Shane Moews] Send Follow-up: Email meeting notes and potential meeting dates for the next call to the participants.
- ☐ [Elliot Thomas, April Broughton] Select Meeting Dates: Select suitable dates for the next meeting from the options provided by Shane Moews.
- ☐ [Elliot Thomas, April Broughton] Update Agenda: Review the proposed agenda on the interlock website and suggest additional safety topics as needed.

Details

- **Participant Introductions:** Shane Moews, Melanie Brodeur, and Amir provided introductions as safety consultants for Telus, while April Broughton and Elliot Thomas represented partner organizations AFL and Activo. Shane Moews described their background in field safety and their role in managing safety for

the CSD program across the country, noting that their colleagues, Melanie Brodeur and Amir, also hold safety portfolios with regional coverage in Eastern and Western Canada. April Broughton introduced themselves as the senior operations manager for AFL's EHS group in Canada, supported by six advisors, and Elliot Thomas identified as the director of operations for Activo East and West, where they have maintained a safety program with minimal incidents since 2020.

- **Primary Safety Challenges:** April Broughton identified worker harassment from residential customers as the primary safety issue currently facing their team on the premise side. They noted that these interactions frequently involve mental health issues and racial harassment, and highlighted that Alberta is the region with the most significant frequency of these occurrences.
- **Purpose and Scope of Meetings:** Shane Moews established that the purpose of these quarterly meetings is to build relationships, share safe work procedures, and address hazards, rather than strictly reviewing accident statistics. Shane Moews argued that reviewing standardized accident data is rarely actionable and does not provide sufficient value to the group unless specific emerging trends exist. The group reached a consensus to prioritize actionable discussions about specific hazards and to utilize these meetings as a forum for shared learning rather than administrative data review.
- **Potential Safety Discussion Topics:** Shane Moews proposed a list of potential topics for future agendas, including working alone protocols, ladder safety, asbestos management, working at night, and the use of lid-lifting tools for service vaults. During the discussion, Elliot Thomas clarified that partner teams do not lift manhole covers and do not work on roofs, effectively excluding those subjects from the immediate agenda. Shane Moews confirmed that they would focus on relevant hazards, such as pole climbing, and continue to assess which topics are of the highest value to the partner groups.
- **Meeting Logistics and Scheduling:** The participants agreed to a quarterly meeting cadence, with the flexibility to cancel or shorten calls if there are no pressing topics. Regarding the next meeting, the group rejected a late September timeframe due to scheduling conflicts identified by Elliot Thomas, opting instead to target early October. Shane Moews committed to sending out follow-up invitations with options for the next meeting date and a proposed

agenda, and also noted they would review attendee suitability to ensure the appropriate representatives are present.

- **Collaboration Website and Information Sharing:** Shane Moews introduced a website created to manage the collaboration process, which serves as a central repository for meeting agendas, tracked topics, and archived meeting minutes. This platform allows participants to view the status of discussed items and prioritize future topics. Shane Moews requested that partners use this resource to identify high-value topics for future agendas and emphasized the importance of using this channel to request information on Telus or AFL's approaches to specific safety situations.
- **Emerging Issue - Dog Bites:** Shane Moews identified dog bites as an emerging safety concern, reporting a frequency of approximately two bites per month for their teams. April Broughton shared a recent experience involving a dog launching at a technician from a home, confirming the severity of this issue. Both parties agreed that this topic warrants future discussion to share mitigation strategies and safety practices for handling animal interactions in the field.
